2026 DATA

## Pharmaceuticals

Pharmaceutical companies are key in providing innovative and accessible solutions to health problems globally. Key challenges are new supply chain risks and scrutiny related to pricing and reimbursement of products as governments seek to increase citizens' access to healthcare. Companies depend heavily on human capital for innovation, continuous development of novel products and improving access to healthcare in underserved communities and low income countries. The industry is characterized by extensive capital invested in research and development with a high risk of failure in product innovation, which is motivating companies to include the patient experience in early phases of research. Innovation process optimization, human capital support and talent management are critical. Controversies related to business ethics, competitive practices and product quality and safety have the potential to cause significant reputational and financial damage.

## Highlighted Criteria & Dimension Weights

### Environmental Dimensions 17%

- Climate Strategy
- Environmental Policy & Management

- Waste & Pollutants

### **Social Dimensions 42%**

- Contribution to Societal Healthcare
- Customer Relations
- Human Capital Management
